ACCSYS AND COVID – CHANGE

By Brian Emmerich, Sales Consultant at Accsys

When one hears the old saying "The only constant is change" none of us realized how huge that change would be. Covid-19 has shaken our working, social, religious and home lives forever. Not all of these are negative. Working from home has suited many as travel time is saved and home comforts are a given. However, when one is working and having your time filled with all that the new means of contact(Zoom, Team's etc.) entails, your spouse who may not be able to work finds that their time drags by. This could lead to conflict, justified or not.

Business is grappling with the issues of getting back to work whilst keeping staff safe and ensuring an environment that maintains the levels of safety. Not to mention the cost and time involved in deep cleaning and employee sanitization measures.

As proud South Africans, we at Accsys have not spared any efforts to ensure that we found cost effective solutions to these issues. We also had to consider the losses business and industry have had to bear due to lockdown. This search continues apace, we have been impressed at how fast

technology has responded. Accsys has made decisions for the changes in hardware and software to be able to be incorporated into the existing Accsys Peopleware suite of people management solutions.

Some of the products that we know can make a huge time and money saving difference to your business are.

- A range of "No touch" access control biometric readers with face recognition, temperature measurement and mask detection should any of these be a requirement before entrance would be allowed.
- The same devices would also be utilized for time and attendance with leave management incorporated.
- Sanitization tunnels

Should you already have Accsys solutions in place, it is advisable to simply add the temperature scanning readers to an existing entrance, while leaving all other devices currently installed, in place.

Find out more about the solutions Accsys has that could assist with compliance and safety, attend our Free@4 Webinar this Thursday https://us02web.zoom.us/webinar/register/WN_NcUpW04hSgewWZ9ikE0f4w
